3. Conceptual modeling

Process

- **Input:** specification of the requirements (natural language description of a sample database domain)
- **Tools:** conceptual modelling formalism, (UML class diagrams, OMT, E-R, ORM, functional diagrams, etc)
- **Output:** conceptual schema (diagram)

3. Conceptual modeling

A simple methodology

Pass 1

Find the classes of objects

Pass 2

Find the associations and association classes

Pass 3

Find the attributes and link attributes

Pass 4

Find the identifiers

Pass 5

Find the qualifications of associations

Pass 6

Find the generalizations

© Janusz R. Getta

CSCI235/MCS9235/CSCI835 Databases

3. Conceptual modeling

Example 1

A group of employees works on the projects.

Some of employees supervise other employees.

An employee is described by an employee number and full name.

A project is described by a project title, completion date and budget.

Employees are identified by the employee numbers and projects are identified by the titles.

4

3. Conceptual modeling

Pass 1: Find the classes of objects

A group of **employees** works on the **projects**. Some of **employees** supervise other **employees**. An **employee** is described by an employee number and full name. A **project** is described by a project title, completion date and budget. **Employees** are identified by the employee numbers and **projects** are identified by the titles.

3. Conceptual modeling

Pass 3: Find the attributes

A group of employees works on the projects. Some of employees supervise other employees. An employee is described by an **employee number** and **full name**. A project is described by a **project title**, **completion date** and **budget**. Employees are identified by the employee numbers and projects are identified by the titles.

3. Conceptual modeling

Pass 4: Find the identifiers

A group of employees works on the projects. Some of employees supervise other employees. An employee is described by an **employee number** and **full name**. A project is described by a **project title**, **completion date** and **budget**. Employees are **identified by the employee numbers** and projects are **identified by the titles**.

3. Conceptual modeling

Pass 5: Find the qualifications

A group of employees works on the projects. Some of employees supervise other employees. An employee is described by a **project title**, **completion date** and **budget**. Employees are identified by the employee numbers and projects are identified by the titles.

3. Conceptual modeling

Pass 6: Find the generalizations

A group of employees works on the projects. Some of employees supervise other employees. An employee is described by a **project title**, **completion date** and **budget**. Employees are identified by the employee numbers and projects are identified by the titles.

3. Conceptual modeling

Example 2

A publishing company publishes the **journals** and **conference proceedings**.
 The **research papers** are included in the journals and proceedings.
 The company employs the **general editors** who take responsibility for the editing research papers.
 A research paper is written by one or more **authors**.

3. Conceptual modeling

Pass 1: Find the classes of objects

A publishing company publishes the **journals** and **conference proceedings**. The **research papers** are included in the journals and proceedings. The company employs the **general editors** who take responsibility for the editing research papers. A research paper is written by one or more **authors**.

3. Conceptual modeling

Pass 2: Find the associations

A publishing company **publishes** the journals and conference proceedings. The research papers are **included in** the journals and proceedings. The company employs the general editors who take responsibility for the **editing** research papers. A research paper is **written by** one or more authors.

3. Conceptual modeling

Example 3

A group of construction companies is involved in the construction of industrial buildings. Each building is located at a different address, it has a unique name, and completion date. A number of construction stages apply to each building. A construction stage is described by the names of construction companies involved together with the start date, completion date, and the total costs. A construction company is usually involved in many construction stages of the same building. Many companies are involved in one construction stage.
